

Öpetfoundation – Advancing Global Education-Inclusion

*Utilizing AI, Chatbot & Blockchain Technologies
to Enable the Equality of Opportunities through Education*

Öpetfoundation is building a one-true source of global high school tertiary/college admission records with our unique **Öpet-Blockchain** solution, to facilitate seamless tertiary application and admission process. Imagine a day where students only need to provide a hashkey to the college they apply to and using our OPET Tokens, the institution can access all the information they require - secure, accurate and tamper free! This ledger can also facilitate a new age of transparent and accountable edu-philanthropy with no leakage!

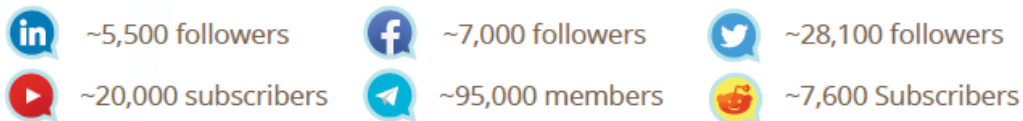

How do we populate our global ledger?

By utilizing adaptive AI recommendation engine, typically seen in Youtube, Netflix or Spotify, **Öpetfoundation** is developing a mobile application chatbot to serve as a learning companion to students in global high schools, and learn about the user through reliable records submitted by the user, thereby recommending them global options for effective college counselling delivered via our contextualized chatbot. To ensure longer period of engagement to “learn” more about the user for better recommendation, the AI adaptive engine can also “learn” the local national/matriculation exam curriculum to deliver an affordable digital test-prep tutor companion with a range of capabilities including personalized recommender, a unified channel for interests, tertiary/college and career counselling.

The Öpet ecosystem is designed to be open-loop for exponential scaling as we expand our operations “Uber-style” from one country to another for

Network Effects to work its magic!
